## MiHome Heating

The MiHome Heating Radiator Valve is a monitor and control product. The MiHome Radiator Valve allows you to monitor the temperature and then adjust the radiator in accordance of the users settings and rules. Using the App you are able to group these in to room or areas and create zoned heating areas. You are able to use all the control features in the MiHome App including simple on/off, timers and geofencing.

The MiHome Radiator Valve is a transmitter and transceiver and therefore will let the user know when an action has been carried out.
