Bosch Power Tools

# English

## Safety Notes

#### **General Power Tool Safety Warnings**

**IMPORTANT** 

When using electric tools basic safety

precautions should always be followed to reduce the risk of fire, electric shock and personal injury including the following.

# Read all these instructions before attempting to operate this product and save these instructions.

The term "power tool" in the warnings refers to your mainsoperated (corded) power tool or battery-operated (cordless) power tool.

#### Work area safety

- ► Keep work area clean and well lit. Cluttered or dark areas invite accidents.
- Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

#### Electrical safety

- Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
- Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges and moving parts. Damaged or entangled cords increase the risk of electric shock.
- When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.

#### Personal safety

- Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask,

non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.

English | 23

- Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.
- Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.
- If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of dust collection can reduce dust-related hazards.

#### Power tool use and care

- Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

#### Service

Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

### **Safety Warnings for Sliding Mitre Saws**

The power tool is provided with a laser warning label (marked with number 38 in the representation of the power tool on the graphics page).

- Do not direct the laser beam at persons or animals and do not stare into the laser beam yourself. This power tool produces laser class 1M laser radiation according to EN 60825-1. Looking or viewing directly into the laser beam – especially with optical instruments such as binoculars etc. – can damage the eye.
- Do not replace the installed laser with another laser type. A laser that does not fit to this power tool could pose dangers for other persons.
- Keep your workplace clean. Blends of materials are particularly dangerous. Dust from light alloys can burn or explode.
- Store the machine in a safe manner when not being used. The storage location must be dry and lockable. This prevents the machine from storage damage, and from being operated by untrained persons.
- Use the machine only for cutting the materials listed under Intended Use. Otherwise, the machine can be subject to overload.
- Always firmly clamp the piece to be worked. Do not saw workpieces that are too small to clamp. Otherwise, the clearance of your hand to the rotating saw blade is too small.
- Keep handles dry, clean, and free from oil and grease. Greasy, oily handles are slippery causing loss of control.
- Never use the machine with a damaged cable. Do not touch the damaged cable and pull the mains plug when the cable is damaged while working. Damaged cables increase the risk of an electric shock.
- Check the cable regularly and have a damaged cable repaired only through an authorised customer service agent for Bosch power tools. Replace damaged extension cables. This will ensure that the safety of the power tool is maintained.
- Do not use dull, cracked, bent or damaged saw blades. Unsharpened or improperly set saw blades produce narrow kerf causing excessive friction, blade binding and kickback.
- Never operate the machine without the insert plate. Replace a defective insert plate. Without flawless insert plates, injuries are possible from the saw blade.
- Do not use high speed steel (HSS) saw blades. Such saw blades can easily break.

- Always use blades with correct size and shape (diamond versus round) of arbour holes. Blades that do not match the mounting hardware of the saw will run eccentrically, causing loss of control.
- Make sure that the guard operates properly and that it can move freely. Never lock the guard in place when opened.
- Operate the power tool only when the work area to the workpiece is clear of any adjusting tools, wood chips, etc. Small pieces of wood or other objects that come in contact with the rotating saw blade can strike the operator with high speed.
- Keep the floor free of wood chips and material remainders. You could slip or trip.
- Never remove cutting remainders, wood chips, etc. from the sawing area while the machine is running. Always guide the tool arm back to the neutral position first and then switch the machine off.
- Do not touch the saw blade after working before it has cooled. The saw blade becomes very hot while working.
- If the saw blade should become jammed, switch the machine off and hold the workpiece until the saw blade comes to a complete stop. To prevent kickback, the workpiece may not be moved until after the machine has come to a complete stop. Correct the cause for the jamming of the saw blade before restarting the machine.
- Never leave the machine before it has come to a complete stop. Cutting tools that are still running can cause injuries.
- Guide the saw blade against the workpiece only when the machine is switched on. Otherwise there is danger of kickback when the saw blade becomes wedged in the workpiece.
- Never stand on the power tool. Serious injuries can occur when the power tool tips over or when inadvertently coming into contact with the saw blade.
- Never make warning signs on the machine unrecognisable.
- Secure the workpiece. A workpiece clamped with clamping devices or in a vice is held more secure than by hand.
- Products sold in GB only: Your product is fitted with a BS 1363/A approved electric plug with internal fuse (ASTA approved to BS 1362).

If the plug is not suitable for your socket outlets, it should be cut off and an appropriate plug fitted in its place by an authorised customer service agent. The replacement plug should have the same fuse rating as the original plug. The severed plug must be disposed of to avoid a possible shock hazard and should never be inserted into a mains socket elsewhere.

Products sold in AUS and NZ only: Use a residual current device (RCD) with a rated residual current of 30 mA or less.

## Symbols

The following symbols can be important for the operation of your power tool. Please memorise the symbols and their meanings. The correct interpretation of the symbols helps you operate the power tool better and more secure.

## Symbols and their meaning

► Laser radiation Do not view directly with optical instruments Class 1M laser product

► Keep hands away from the cutting area while the machine is running. Danger of injury when coming in contact with the saw blade.

► Wear safety goggles.

► Wear a dust respirator.

Wear ear protectors. Exposure to noise can cause hearing loss.

 Danger area! Keep hands, fingers or arms away from this area.

When sawing mitre/bevel angles, the adjustable fence must be pulled outward.

The free end of workpieces must be underlaid or supported by the saw-table extensions.

## English | **25**

#### Symbols and their meaning

Observe the dimensions of the saw blade. The hole diameter must match the tool spindle without play. Do not use reducers or adapters.

Do not dispose of power tools into household waste!

Only for EC countries:

According to the European Guideline 2012/19/EU for Waste Electrical and Electronic Equipment and its implementation into national right, power tools that are no longer usable must be collected separately and disposed of in an environmentally correct manner.

**Clamping lever shut:** The set bevel angle of the tool arm is locked.

**Clamping lever open:** Adjusting bevel angles is possible.

# Product Description and Specifications

**Read all safety warnings and all instructions.** Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

## **Intended Use**

The power tool is intended as a stationary machine for making straight lengthways and crossways cuts in hard and softwood, as well as in particle and fibre board. In this, mitre angles from  $-52^{\circ}$  to  $+60^{\circ}$  as well as bevel angles from  $-2^{\circ}$  to  $+47^{\circ}$  are possible.

When using appropriate saw blades, sawing aluminium profiles and plastic is also possible.

## **Product Features**

The numbering of the components shown refers to the representation of the power tool on the graphic pages.

- 1 Slide device
- 2 Chip ejector
- 3 Transport handle
- 4 Adjusting screw of depth stop
- 5 Laser protection cap
- 6 Roller
- 7 On/Off switch
- 8 Handle
- 9 Locking switch for releasing the tool arm
- 10 Blade guard
- **11** Retracting blade guard
- 12 Saw blade
- 13 Saw-Table extension
- 14 Fence
- 15 Saw table
- 16 Clamping lever of the saw-table extension
- 17 Scale for mitre angle
- 18 Insert plate
- 19 Locking bracket
- 20 Locking knob for various mitre angles
- 21 Mitre detent lever
- 22 Tilt protector
- 23 Mitre angle indicator
- 24 Detents for standard mitre angles
- 25 Mounting holes
- 26 Recessed handles
- 27 Adjustable fence
- 28 Locking screw of the adjustable fence
- 29 Material clamp
- 30 Stop for standard 45°, 22.5° and 33.9° bevel angles

- 31 Chip deflector
- 32 Depth stop
- 33 Locking screw for slide device
- **34** Hex key(5 mm)
- 35 Mounting holes for material clamp
- 36 Material stop\*
- 37 Transport safety-lock
- 38 Laser warning label
- 39 Laser on/off switch (for marking of cutting line)
- 40 Clamping lever for any bevel angle
- **41** Scale for bevel angle
- 42 Indicator for bevel angle
- 43 Stop for 0° standard bevel angle
- 44 Spindle lock
- 45 Hex socket screw (size 5 mm) for mounting of saw blade
- 46 Clamping flange
- 47 Interior clamping flange
- 48 Threaded rod
- 49 Screws for insert plate
- 50 Lock screw of the material stop\*
- 51 Clamping screw of the material stop\*
- **52** Adjustment screw for laser position (parallelism)
- **53** Stop screw for 0° bevel angle
- 54 Screw for bevel angle indicator
- 55 Stop screw for 45° bevel angle
- 56 Set screws of scale 17 for mitre angles
- **57** Screw for mitre angle indicator
- 58 Velcro strap
- 59 Laser lens cover

\*Accessories shown or described are not part of the standard delivery scope of the product. A complete overview of accessories can be found in our accessories program.

## **Technical Data**

Sliding Mitre Saw				GCM 8 SJL
Article number			3 601 M19 1P0

Permissible workpiece dimensions (maximal/minimal) see page 30.

The values given are valid for a nominal voltage [U] of 230 V. For different voltages and models for specific countries, these values can vary.

**Bosch Power Tools** 

English | 27

## **Noise/Vibration Information**

Sound emission values determined according to EN 61029-2-9.

Typically the A-weighted noise levels of the product are: Sound pressure level 99 dB(A); Sound power level 112 dB(A). Uncertainty K = 3 dB.

#### Wear hearing protection!

Vibration total values  $a_h$  (triax vector sum) and uncertainty K determined according to EN 61029:

 $a_h = 2.5 \text{ m/s}^2$ , K = 1.5 m/s<sup>2</sup>.

The vibration emission level given in this information sheet has been measured in accordance with a standardised test given in EN 61029 and may be used to compare one tool with another. It may be used for a preliminary assessment of exposure.

The declared vibration emission level represents the main applications of the tool. However if the tool is used for different applications, with different accessories or poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or when it is running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration such as: maintain the tool and the accessories, keep the hands warm, organisation of work patterns.

# Declaration of Conformity

We declare under our sole responsibility that the product described under "Technical Data" is in conformity with all relevant provisions of the directives 2011/65/EU, 2014/30/EU, 2006/42/EC including their amendments and complies with the following standards:

EN 61029-1, EN 61029-2-9, EN 60825-1.

Technical file (2006/42/EC) at:

Robert Bosch GmbH, PT/ETM9, 70764 Leinfelden-Echterdingen, GERMANY

Henk Becker Executive Vice President Engineering Helmut Heinzelmann Head of Product Certification PT/ETM9

Robert Bosch GmbH, Power Tools Division 70764 Leinfelden-Echterdingen, GERMANY Leinfelden, 04.07.2014

## Assembly

Avoid unintentional starting of the machine. During assembly and for all work on the machine, the power plug must not be connected to the mains supply.

#### **Delivery Scope**

Before starting the operation of the machine for the first time, check if all parts listed below have been supplied:

- Sliding mitre saw with mounted saw blade
- Material clamp 29
- Hex key 34

Note: Check the power tool for possible damage.

Before further use of the machine, check that all protective devices are fully functional. Any lightly damaged parts must be carefully checked to ensure flawless operation of the tool. All parts must be properly mounted and all conditions fulfilled that ensure faultless operation.

Damaged protective devices and parts must be immediately replaced by an authorised service centre.

#### **Stationary or Flexible Mounting**

To ensure safe handling, the machine must be mounted on a level and stable surface (e.g., workbench) prior to using.

#### Mounting to a Working Surface (see figures A - B)

 Fasten the power tool with suitable screw fasteners to the working surface. The mounting holes 25 serve for this purpose.

or

 Clamp the power tool with commercially available screw clamps by the feet to the working surface.

#### Mounting to a Bosch Saw Stand

With the height-adjustable legs, Bosch GTA saw stands provide firm support for the power tool on any surface. The workpiece supports of the saw stand are used for underlaying long workpieces.

- Read all safety warnings and instructions included with the worktable. Failure to observe safety warnings and instructions can lead to electrical shock, fire and/or cause serious injuries.
- Assemble the worktable properly before mounting the power tool. Perfect assembly is important in order to prevent the risk of collapsing.
- Mount the power tool in transport position on the saw stand.

## Flexible Mounting (not recommended!) (see figure C)

In exceptional cases, when it is not possible to mount the machine onto a level and stable work surface, it can be set up using the tilt protector.

- Without the use of the tilt protector, the machine does not stand safely and can tip over, especially when sawing at maximum mitre/bevel angles.
- Screw the tilt protector 22 in or out until the machine is positioned level on the working surface.

## **Dust/Chip Extraction**

Dusts from materials such as lead-containing coatings, some wood types, minerals and metal can be harmful to one's health. Touching or breathing-in the dusts can cause allergic reactions and/or lead to respiratory infections of the user or bystanders.

Certain dusts, such as oak or beech dust, are considered as carcinogenic, especially in connection with wood-treatment additives (chromate, wood preservative). Materials containing asbestos may only be worked by specialists.

- Always use dust extraction.
- Provide for good ventilation of the working place.
- It is recommended to wear a P2 filter-class respirator.
   Observe the relevant regulations in your country for the materials to be worked.
- Prevent dust accumulation at the workplace. Dusts can easily ignite.

The dust/chip extraction can be blocked by dust, chips or workpiece fragments.

- Switch the machine off and pull the mains plug from the socket outlet.
- Wait until the saw blade has come to a complete stop.
- Determine the cause of the blockage and correct it.

#### **External Dust Extraction**

For dust extraction, a vacuum hose (size  $\emptyset$  35 mm) can also be connected to the chip ejector **2**.

- Connect the vacuum hose with the chip ejector 2.

The vacuum cleaner must be suitable for the material being worked.

When vacuuming dry dust that is especially detrimental to health or carcinogenic, use a special vacuum cleaner.

## Changing the Saw Blade (see figures D1 – D4)

#### When mounting the saw blade, wear protective gloves. Danger of injury when touching the saw blade.

Use only saw blades whose maximum permitted speed is higher than the no-load speed of the power tool.

Use only saw blades that correspond with the characteristic data given in these operation instructions and that are tested and marked in accordance with EN 847-1.

Use only saw blades recommended by the tool manufacturer and suitable for sawing the materials to be cut.

#### **Removing the Saw Blade**

- Bring the power tool into the working position.
- Turn hex socket screw 45 with the hex key (5 mm) 34 and at the same time press the spindle lock 44 until it engages.
- Hold the spindle lock 44 pressed and unscrew the hex socket screw 45 in clockwise direction (left-hand thread!).
- Remove the clamping flange **46**.
- Press locking switch 9 and swing back the retracting blade guard 11 to the stop.
- Hold the retracting blade guard in this position and remove the saw blade 12.
- Slowly guide the retracting blade guard downward again.

#### Mounting the Saw Blade

If required, clean all parts to be mounted prior to assembly.

- Press locking switch 9, swing back the retracting blade guard 11 to the stop and hold it in this position.
- Place the new saw blade onto the interior clamping flange 47.
- When mounting the saw blade, pay attention that the cutting direction of the teeth (arrow direction on the saw blade) corresponds with the direction of the arrow on the blade guard!
- Slowly guide the retracting blade guard downward again.
- Place on the clamping flange 46 and the screw 45.
   Press the spindle lock 44 until it engages and tighten the screw turning in anticlockwise direction.

## Operation

Before any work on the machine itself, pull the mains plug.

## Transport Safety (see figure E)

The transport safety-lock **37** enables easier handling of the machine when transporting to various working locations.

#### **Releasing the Machine (Working Position)**

- Push the tool arm by the handle 8 down a little in order to relieve the transport safety-lock 37.
- Pull the transport safety-lock 37 completely outward.
- Guide the tool arm slowly upward.

#### Securing the Machine (Transport Position)

- Loosen the locking screw 33 if tightened. Pull the tool arm completely to the front and tighten the locking screw again.
- Screw adjusting screw 4 completely upward.
- To lock the saw table **15**, tighten the locking knob **20**.
- Press locking switch 9 and slowly guide the tool arm downward by the handle 8.
- Guide the tool arm downward until the transport safetylock 37 can be pushed completely inward.

## **Preparing for Operation**

### Extending the Saw Table (see figure F)

Long workpieces must be underlaid or supported at their free end.

The saw table can be extended left and right with the saw-table extensions **13**.

- Push clamping lever 16 upward.
- Pull out the saw-table extension 13 to the desired length.
- To lock the saw-table extension, push clamping lever **16** down again.

#### Moving the Fence (see figure G)

When sawing bevel angles, the adjustable fence **27** must be pulled outward or removed completely.

Mitre/Be	vel Angle	
Vertical	Horizontal	
-2°- 47°	≤ 44° (right- ward)	<ul> <li>Loosen locking screw 28.</li> <li>Pull the adjustable fence 27 completely outward.</li> </ul>
0°- 47°	≥ 45° (right- ward)	<ul> <li>Remove locking screw 28.</li> <li>Pull the adjustable fence 27 completely outward.</li> <li>Remove the adjustable fence upward.</li> </ul>

#### Clamping the Workpiece (see figure H)

To ensure optimum working safety, the workpiece must always be firmly clamped.

Do not saw workpieces that are too small to clamp.

- Press the workpiece firmly against the fence 14.
- Insert the material clamp 29 provided into one of the holes 35 intended for it.
- Adapt the threaded rod 48 of the screw clamp to the workpiece height.
- Firmly tighten the threaded rod 48, thus fastening the workpiece.

## **Adjusting Mitre Angles**

To ensure precise cuts, the basic adjustment of the machine must be checked and adjusted as necessary after intensive use (see "Checking and Adjusting the Basic Adjustment", page 31).

#### Adjusting Standard Mitre Angles (see figure I)

For quick and precise adjustment of commonly used mitre angles, detents **24** have been provided for on the saw table:

	Left							F	Right	
				0	0					
1	45°	31.6°	22.5°	15°	15°	22.5°	31.6°	45°	60°	

- Loosen the locking knob **20** in case it is tightened.

- Pull lever 21 and rotate the saw table 15 left or right to the requested detent.
- Release the lever again. The lever must be felt to engage in the detent.

#### Adjusting Any Mitre Angle (see figure J)

The mitre angle can be set in the range from  $52^{\circ}$  (left side) to  $60^{\circ}$  (right side).

- Loosen the locking knob 20 in case it is tightened.
- Pull lever 21 and at the same time push the locking bracket
   19 until it engages in the groove intended for this. The saw table can be moved freely now.
- Turn the saw table 15 left or right by the locking knob until the angle indicator 23 indicates the requested mitre angle.

#### For mitre angles greater than 45°:

Pull the saw-table extension **13** completely outward (see "Extending the Saw Table", page 28).

- Tighten the locking knob 20 again.

**Bosch Power Tools** 

 To loosen the lever 21 again (for adjusting standard mitre angles), pull the lever upward.
 The lever product 10 graph back to its original position.

The locking bracket **19** snaps back to its original position and lever **21** can re-engage into the detents **24**.

## **Adjusting Bevel Angles**

#### Adjusting Standard Bevel Angles (see figure K)

For quick and precise setting of frequently used bevel angles, stops have been provided for the 0°,  $45^{\circ}$ ,  $22.5^{\circ}$  and  $33.9^{\circ}$  angles.

- Loosen clamping lever 40.
- Adjust stops **30** or **43** as follows:

Mitre/ Bevel Angle	Stop	Adjustment
0°	43	Push the stop completely to the rear
45°	30	Turn the stop completely to the front
22.5°	30	Turn the stop to the centre
33.9°	30	Turn the stop to the rear

Swing the tool arm with the handle 8 to the requested position.

- Tighten clamping lever **40** again.

#### **Adjusting Any Bevel Angle**

The bevel angle can be set in a range from  $-2^{\circ}$  to  $+47^{\circ}$ .

- Loosen clamping lever 40.
- Turn stop 30 completely to the rear and pull stop 43 completely to the front.

The complete tilting range is now available.

- Tilt the tool arm by the handle 8 until the angle indicator 42 indicates the desired bevel angle.
- Hold the tool arm in this position and tighten clamping lever 40 again.

#### **Starting Operation**

Observe correct mains voltage! The voltage of the power source must agree with the voltage specified on the nameplate of the machine. Power tools marked with 230 V can also be operated with 220 V.

#### Switching On (see figure L)

For starting operation, pull the On/Off switch 7 in the direction of the handle 8.

**Note:** For safety reasons, the On/Off switch **7** cannot be locked; it must remain pressed during the entire operation. The tool arm can only be guided downward by pressing locking switch **9**.

 For sawing, the locking switch 9 must be therefore pushed in addition to pressing the On/Off switch 7.

#### Switching Off

- To switch off the machine, release the On/Off switch 7.
- To save energy, only switch the power tool on when using it.

## **Working Advice**

**General Sawing Instructions** 

For all cuts, it must first be ensured that the saw blade at no time can come in contact with the fence, screw clamps or other machine parts. Remove possibly mounted auxiliary stops or adjust them accordingly.

Protect the saw blade against impact and shock. Do not subject the saw blade to lateral pressure.

Do not saw warped/bent workpieces. The workpiece must always have a straight edge to face against the fence.

Long workpieces must be underlaid or supported at their free end.

#### Marking the Cutting Line (see figure M)

A laser beam indicates the cutting line of the saw blade. This allows for exact positioning of the workpiece for sawing, without having to open the retracting blade guard.

- For this, switch the laser beam on with the switch 39.
- Align the cutting mark on your workpiece with reference to the right-hand edge of the laser line.

**Note:** Before sawing, check if the cutting line is still indicated correctly (see "Adjusting the Laser", page 31). The laser beam, as an example, can misadjust due to vibrations after intensive use.

#### Position of the Operator (see figure N)

- Do not stand in a line with the saw blade in front of the machine. Always stand aside of the saw blade. This protects your body against possible kickback.
- Keep hands, fingers and arms away from the rotating saw blade.
- Do not cross your arms when operating the tool arm.

#### **Permissible Workpiece Dimensions**

#### Maximal workpiece sizes:

Mitre/Beve	Mitre/Bevel Angle		
Horizontal	Vertical	[mm]	
0°	0°	70 x 312	
45° (leftward/			
rightward)	0°	70 x 225	
0°	45°	45 x 312	
45° (leftward)	45°	45 x 225	
45° (rightward)	45°	45 x 225	

**Minimal** workpiece sizes (= all workpieces that can be clamped left or right from the saw blade with the supplied material clamp **29**): 100 x 40 mm (length x width)

Cutting depth, max.  $(0^{\circ}/0^{\circ})$ : 70 mm

## Replacing Insert Plates (see figure 0)

The red insert plates  ${\bf 18}$  can become worn after prolonged use of the machine.

Replace defective insert plates.

- Bring the power tool into the working position.
- Unscrew the screws **49** with a hex key (size 4 mm) and remove the old insert plates.

- Insert the new right-hand insert plate.
- Screw the insert plate as far as possible to the right with the screws 49 so that the saw blade does not come into contact with the insert plate over the complete length of the possible slide motion.
- Repeat the work steps in the same manner for the left-hand insert plate.

#### Sawing

Always tighten the locking knob 20 firmly before sawing. Otherwise the saw blade can become wedged in the workpiece.

# Sawing without Slide Movement (Cutting Off) (see figure P)

- For cuts without slide movement (small workpieces), loosen the locking screw 33 in case it is tightened. Slide the tool arm to the stop in the direction of the fence 14 and retighten the locking screw 33.
- Set the desired mitre angle.
- Firmly clamp the workpiece as appropriate for its dimensions.
- Switch on the machine.
- Press locking switch 9 and slowly guide the tool arm downward by the handle 8.
- Saw through the workpiece applying uniform feed.
- Switch off the machine and wait until the saw blade has come to a complete stop.
- Guide the tool arm slowly upward.

#### **Sawing with Slide Movement**

- For cuts using the slide device 1 (wide workpieces), loosen the locking screw 33 in case it is tightened.
- Set the desired mitre angle.
- Firmly clamp the workpiece as appropriate for its dimensions.
- Pull the tool arm away from the fence **14** far enough so that the saw blade is in front of the workpiece.
- Switch on the machine.
- Press locking switch 9 and slowly guide the tool arm downward by the handle 8.
- Press the tool arm in the direction of the fence 14 and saw through the workpiece applying uniform feed.
- Switch off the machine and wait until the saw blade has come to a complete stop.
- Guide the tool arm slowly upward.

#### Sawing Workpieces of the Same Length (see figure Q)

The material stop **36** (accessory) can be used for easily sawing workpieces to the same length.

The material stop can be mounted on either side of the saw table extension **13**.

- Loosen lock screw 50 and swing the material stop 36 over clamping screw 51.
- Retighten lock screw 50.
- Adjust the saw table extension 13 to the desired length (see "Extending the Saw Table", page 28).

#### Adjusting the Depth Stop (Sawing Grooves) (see figure R)

The depth stop must be adjusted when a trench gap is to be sawed

- Swivel the depth stop 32 outward.
- Press locking lever 9 and tilt the tool arm to the desired position.
- Turn adjusting screw 4, until the screw end touches depth stop 32.
- Guide the tool arm slowly upward.

#### **Special Workpieces**

When sawing curved or round workpieces, these must be especially secured against slipping. At the cutting line, no gap may exist between workpiece, fence and saw table. Provide for special fixtures, if required.

## **Checking and Adjusting the Basic Adjustment**

#### Before any work on the machine itself, pull the mains plug.

To ensure precise cuts, the basic adjustment of the machine must be checked and adjusted as necessary after intensive lise

A certain level of experience and appropriate specialty tools are required for this.

A Bosch after-sales service station will handle this maintenance task guickly and reliably.

#### Adjusting the Laser

Note: To test the laser function, the machine must be connected to power.

- ▶ While adjusting the laser (e.g. when moving the tool arm), never actuate the On/Off switch. Accidental starting of the power tool can lead to injuries.
- Bring the power tool into the working position.
- Turn the saw table 15 to the 0° detent 24. The lever 21 must be felt to engage in the detent.
- Switch the laser beam on with switch 39.

#### Checking: (see figure S1)

- Draw a straight cutting line on the workpiece.
- Press locking switch 9 and slowly guide the tool arm downward by the handle 8.
- Align the workpiece in such a manner that the teeth of the saw blade are in alignment with the cutting line.
- Hold the workpiece in this position and slowly guide the tool arm upward again.
- Clamp the workpiece.

The laser beam must be in alignment with the cutting line on the workpiece over the complete length, also when the tool arm is lowered.

## Adjusting: (see figure S2)

Screw the adjustment screw 52 in or out using a suitable screwdriver until the laser beam is parallel with the cutting line on the workpiece over the complete length.

One rotation in anticlockwise direction moves the laser beam from left to right; one rotation in clockwise direction moves the laser beam from right to left.

#### Setting the Standard Bevel Angle 0° (Vertical)

- Bring the power tool into the working position.
- Turn the saw table 15 to the 0° detent 24. The lever 21 must be felt to engage in the detent.

English | 31

#### Checking: (see figure T1)

Adjust an angle gauge to 90° and position it on the saw table 15

The leg of the angle gauge must be flush with the saw blade 12 over the complete length.

#### Adjusting: (see figure T2)

- Loosen clamping lever 40.
- Push the stop **43** completely to the rear.
- Loosen the lock nut of the stop screw 53 using a commercial box-end or open-end spanner (size 10 mm).
- Screw the stop screw in or out until the leg of the angle gauge is flush with the saw blade over the complete length.
- Tighten clamping lever 40 again.
- Afterwards, retighten the lock nut of the stop screw 53 again.

In case the angle indicator 42 is not in a line with the 0° mark of the scale 41 after the adjustment. loosen the screw 54 using a commercial cross-head screwdriver and align the angle indicator along the 0° mark.

#### Setting the Standard Bevel Angle 45° (Vertical)

- Bring the power tool into the working position.
- Turn the saw table 15 to the 0° detent 24. The lever 21 must be felt to engage in the detent.
- Turn the stop 30 completely to the front.
- Loosen clamping lever 40 and tilt the tool arm by handle 8 leftward to the stop (45°).

#### **Checking:** (see figure U1)

Adjust an angle gauge to 45° and position it on the saw table 15.

The leg of the angle gauge must be flush with the saw blade 12 over the complete length.

#### Adjusting: (see figure U2)

- Loosen the lock nut of the stop screw 55 using a commercial box-end or open-end spanner (size 10 mm).
- Screw the stop screw in or out until the leg of the angle gauge is flush with the saw blade over the complete length.
- Tighten clamping lever 40 again.
- Afterwards, retighten the lock nut of the stop screw 55 again

In case the angle indicator 42 is not in a line with the 45° mark of the scale 41, firstly check the 0° setting for the bevel angle and the angle indicator again. Then repeat the adjustment of the 45° bevel angle.

#### Aligning the Scale for Mitre Angles

- Bring the power tool into the working position.
- Turn the saw table 15 to the 0° detent 24. The lever 21 must be felt to engage in the detent.

#### Checking: (see figure V1)

 Adjust an angle gauge to 90° and position it between the fence 14 and the saw blade 12 on the saw table 15.

The leg of the angle gauge must be flush with the saw blade **12** over the complete length.

#### Adjusting: (see figure V2)

- Loosen all four set screws 56 with a cross-head screwdriver and turn the saw table 15 together with the scale 17 until the leg of the angle gauge is flush with the saw blade over the complete length.
- Retighten the screws again.

When the angle indicator **23** is not in line with the 0° mark of scale **17** after adjusting, loosen screw **57** with a cross-head screwdriver and align the angle indicator alongside the 0° mark.

## Transport (see figure W)

Before transporting the power tool, the following steps must be carried out:

- Loosen the locking screw 33 if tightened. Pull the tool arm completely to the front and tighten the locking screw again.
- Make sure that the depth stop 32 is pushed completely inward and that adjusting screw 4 fits through the recess without touching the depth stop when moving the tool arm.
- Bring the machine into the transport position.
- Remove all accessories that cannot be mounted firmly to the power tool.

If possible, place unused saw blades in an enclosed container for transport.

- Wind up the mains cable and tie it together with Velcro strap 58.
- Carry the machine by the transport handle 3 or hold it by the recessed handles 26 on the sides of the saw table.
- The power tool should always be carried by two persons in order to avoid back injuries.
- When transporting the power tool, use only the transport devices and never use the protective devices.

## **Maintenance and Service**

## **Maintenance and Cleaning**

Before any work on the machine itself, pull the mains plug.

If the replacement of the supply cord is necessary, this has to be done by Bosch or an authorized Bosch service agent in order to avoid a safety hazard.

## Cleaning

For safe and proper working, always keep the power tool and its ventilation slots clean.

The retracting blade guard must always be able to move freely and retract automatically. Therefore, always keep the area around the retracting blade guard clean.

Remove dust and chips after each working procedure by blowing out with compressed air or with a brush.

Clean the roller 6 regularly.

To clean the laser unit, turn the laser lens cover **59** outward and remove any dust using a brush (see figure X).

#### Accessories

	Article number

## **After-sales Service and Application Service**

Our after-sales service responds to your questions concerning maintenance and repair of your product as well as spare parts. Exploded views and information on spare parts can also be found under:

#### www.bosch-pt.com

Bosch's application service team will gladly answer questions concerning our products and their accessories.

In all correspondence and spare parts order, please always include the 10-digit article number given on the type plate of the machine.

#### **Great Britain**

Robert Bosch Ltd. (B.S.C.) P.O. Box 98 Broadwater Park North Orbital Road Denham Uxbridge UB 9 5HJ At www.bosch-pt.co.uk you can order spare parts or arrange the collection of a product in need of servicing or repair. Tel. Service: (0844) 7360109 E-Mail: boschservicecentre@bosch.com

#### Disposal

The machine, accessories and packaging should be sorted for environmental-friendly recycling. Do not dispose of power tools into household waste!

#### **Only for EC countries:**

According to the European Directive 2012/19/EU for Waste Electrical and Electronic Equipment and its implementation into national right, power tools that are no longer usable must be collected separately and disposed of in an environmentally correct manner.

Subject to change without notice.
