IMPORTANT SAFETY INSTRUCTIONS – SAVE THESE INSTRUCTIONS – PLEASE READ ENTIRE MANUAL PRIOR TO USE

Specifications

- ✦ Weight capacity free standing or stacked-DO NOT EXCEED: 272 kg (600 lb.) includes any components or accessories
- ✦ Weight capacity wall mounted-DO NOT EXCEED: 90.7 kg (200 lb.) includes any components or accessories
- ✦ Do not stack more than 2 rack assemblies

The CFR16 series is designed to support audio/video equipment.

⚠ CAUTION: If free standing, to prevent tipping, always load the rack from the bottom up, and load the heaviest item in the rack first. If free standing, 50% of the total weight should be mounted in the lower 1/3 of the rack.

If wall mounted, weight can be distributed as required.

⚠ CAUTION: Avoid potential personal injuries and property damage!

- ✘ Do not use this product for any purpose not explicitly specified by manufacturer
- ✘ The wall must be capable of supporting five times the weight of the rack and components or accessories combined
- ✘ If you do not understand these instructions, or have doubts about the safety of the installation, assembly or use of this product, contact Customer Service or call a qualified contractor
- ✘ Manufacturer is not responsible for damage or injury caused by incorrect assembly or use

Frame Construction

Frame Construction

5

Repeat steps 1 and 2 with upper brace [03].

6

Secure upper brace [03] with nuts [08].

7

Attach alignment panels [04] with screws [09].

Install Feet (optional) for use on floor

1

Lay assembled frame on its back.

2

Install feet [07].

3

Adjust the feet [07] to level the rack.

4

Tighten nuts (N) until they are flush with the bottom of the rack.

▲ CAUTION: To avoid potential injury or property damage, always ensure that your rack is level.

Install Casters (optional CA6CK caster kit purchased separately)

1

Lay assembled frame on its back.

2

Install casters (purchased separately). Make sure casters are screwed in until the nuts at the top of the casters are flush against the frame.

Stacking (second rack sold separately)

1

Fit second frame (without feet) onto first frame.

2

Secure frames with stacking screws [10].

Single Wall Mounting (wood stud)

1

Locate studs. Verify the center of the stud with an awl or thin nail or use an edge to edge stud finder.

⚠ CAUTION: Avoid potential personal injuries and property damage!

- ✖ Any material covering the wall must not exceed 16 mm (5/8 in.).
- ✖ Minimum wood stud size: common 2 x 4 in (nominal 1½ x 3½ in.).

2

Level frame assembly and mark hole locations.

3

Drill pilot holes as illustrated.

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage: pilot holes **MUST** be drilled to a depth of 89 mm (3½ in.), using a 5.5 mm (7/32 in.) diameter drill bit.

4

Start upper lag bolts [14], hang frame assembly on bolts [14], then slip "U" washers [11] onto the upper bolts [14]. Lower bolts [14] use round washers [12].

Tighten lag bolts [14] only until the washers [11] and [12] are pulled firmly against the brace [03].

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage **DO NOT** over-tighten the lag bolts [14].

Single Wall Mounting (solid concrete and concrete block)

1

Level frame assembly and mark hole locations.

2

Drill pilot holes as illustrated.

⚠ CAUTION: To avoid potential injuries or property damage:

- ✖ Pilot holes **MUST** be drilled to a depth of 89 mm (3½ in.) using a 10 mm (3/8 in.) diameter drill bit.
- ✖ Never drill into the mortar between blocks.
- ✖ Minimum solid concrete thickness: 8 in.
- ✖ Minimum concrete block size: 8 x 8 x 16 in.

3

Insert lag bolt anchors [13].

⚠ CAUTION: To avoid potential injuries or property damage be sure the anchors [13] seat flush with the concrete surface.

4

Start upper lag bolts [14], hang frame assembly on bolts [14], then slip "U" washers [11] onto the upper bolts [14]. Lower bolts [14] use round washers [12].

Tighten lag bolts [14] only until the washers [12] and [12] are pulled firmly against the brace [03].

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage **DO NOT** over-tighten the lag bolts [14].

Wall Mounting - Stacking (wood stud)

1

Fit second frame onto first frame.
Secure frames with stacking screws [10].

2

Locate studs. Verify the center of the stud with an awl or thin nail or use an edge to edge stud finder.

⚠ CAUTION: Avoid potential personal injuries and property damage!

- ✦ Any material covering the wall must not exceed 16 mm (5/8 in.).
- ✦ Minimum wood stud size: common 2 x 4 in (nominal 1 ½ x 3 ½ in).

3

Level frame assembly and mark top hole locations.

4

Drill pilot holes as illustrated.

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage: pilot holes **MUST** be drilled to a depth of 89 mm (3.5 in.), using a 5.5 mm (7/32 in.) diameter drill bit.

5

Start top lag bolts [14]. Leave approximately 13 mm (1/2 in.) of space from the bolt head to the wall.

6

Hang frame assembly on bolts [14].

7

Slip "U" washers [11] onto the bolts [14].

Tighten lag bolts [14] only until the washers [11] are pulled firmly against the brace [03].

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage **DO NOT** over-tighten the lag bolts [14].

8

Drill remaining pilot holes as illustrated.

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage: pilot holes **MUST** be drilled to a depth of 89 mm (3.5 in.), using a 5.5 mm (7/32 in.) diameter drill bit.

9

Tighten lag bolts [14] only until the washers [11] and [12] are pulled firmly against the brace [03].

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage **DO NOT** over-tighten the lag bolts [14].

Wall Mounting - Stacking (solid concrete or concrete block)

1

Fit second frame onto first frame.
Secure frames with stacking screws
[10].

2

Level frame assembly and mark hole locations.

3

Drill pilot holes as illustrated.

⚠ CAUTION: To avoid potential injuries or property damage:

- ✦ Pilot holes **MUST** be drilled to a depth of 89 mm (3.5 in.) using a 10 mm (3/8 in.) diameter drill bit.
- ✦ Never drill into the mortar between blocks.
- ✦ Minimum solid concrete thickness: 8 in.
- ✦ Minimum concrete block size: 8 x 8 x 16 in.

4

Insert lag bolt anchors [13].

⚠ CAUTION: To avoid potential injuries or property damage be sure the anchors [13] seat flush with the concrete surface.

5

Start upper lag bolts [14], hang frame assembly on bolts [14], then slip "U" washers [11] onto the upper bolts [14]. Lower bolts [14] use round washers [12].

Tighten lag bolts [14] only until the washers [11] and [12] are pulled firmly against the brace [03].

⚠ CAUTION: Improper use could reduce the holding power of the lag bolt. To avoid potential injuries or property damage **DO NOT** over-tighten the lag bolts [14].

Install Shelves

1

Install shelves [05] and [06] with screws [09].

2

After at least 3 shelves or rack mounted components are installed, the alignment panels [04] may be relocated or removed for additional rack space.

Install Shelf Backstops (optional)

⚠ CAUTION: To prevent tipping, always load the rack from the bottom up, and load the heaviest item in the rack first. 50% of the total weight should be mounted in the lower 1/3 of the rack.

1. Insert backstop [15] into slot behind component.
2. Slide backstop [15] forward until firmly against component and twist 90 degrees.

Install Component Straps (optional)

1. Slide straps [16] through slots in sides of shelves.
2. Wrap straps [16] over component to secure.
