

PLINTH LOCK Patent Pending

Features:

- Plinth Lock is a revolutionary, patented and concealed locking system for kitchen plinths, corner posts, filler panels and many more.
- Quick and easy to fit, plinth lock eliminates unsightly screw fixings and locks plinths, posts etc. firmly in place. It maintains a 90° solid 'look' to the kitchen previously unavailable from current standard industry fittings

Directions for use:

Simply line up and screw into place with the four screws provided.

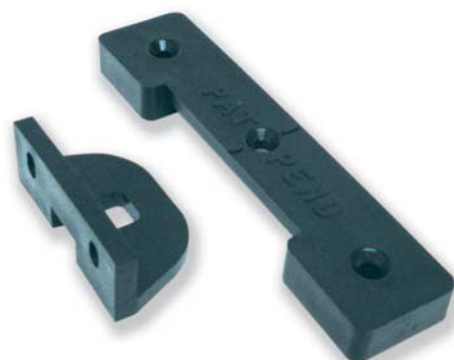

Product Advantages:

Plinth lock acts as a strong stabilising system which keeps plinths in place for years to come. Usually plinths can get knocked with mops, vacuums and even accidentally kicked (which is why they sometimes get called kick plates). Without Plinth Lock, plinths often look badly fitted and shabby within weeks of a kitchen being installed. By using Plinth lock all kitchen posts, plinths, panels etc are held rigid with no room for movement.

Retailer Opportunity:

Supplying Plinth Lock with every kitchen fitted will ensure panels/plinths stay looking good for many years instead of just a few weeks/months. So there will be no customer complaints once the job is complete.

Fitters will also find it easier and quicker to complete job with this simple to fit Plinth Lock system.
