

PRECISION WEDGES

Relevant Product Code

76521

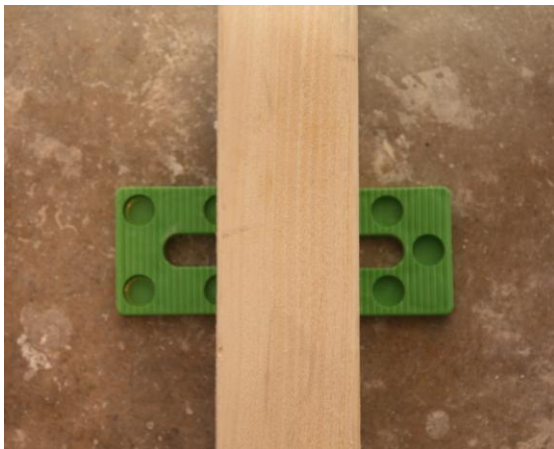

Applications

There are many packing applications where a wedge packer is the most appropriate solution. Typical of this would be the levelling of timber subframes but they can also be used in many different applications in construction and DIY projects. They are rot proof, water proof packers so can be used in interior or exterior applications.

Size

Single size 77mm length x 45mm length tapering from 1mm to 8mm with a slot to accommodate a fixing up to M10 – colour : green

Instructions for Use

Precision wedges are generally used in pairs. To level a batten or subframe, insert a Precision Wedge from each side of the batten or subframe so that they engage with each other and push them equally towards one another until the required level position has been reached. The serration on the packers will engage with each other ensuring that they level position will be maintained as the packers will not slip against each other. A fixing can then be inserted through the timber and within the slot zone of the packers.
