RONSEAL®

Does exactly what it says on the tin®

Additional User Instructions

How to prepare your Fence Life for Spraying

1. Give your Ronseal Sprayable Fence Life a good shake and a stir, this is normally the only prep you need

2. Fence Life can thicken up when in storage and when it gets cold. It's best to leave it out in the sun or somewhere warm before pouring it into your sprayer. If it looks really thick, add a bit of warm water. Don't dilute it more than 10%. Then give it another good stir.

If you've already tried spraying and it's not coming out, check point 2 above. Clean the filters in the handle and nozzle before trying to spray it again
